

Dental Implant Fact Sheet

Dental Implants are a permanent solution to help you recapture the health and appearance of your smile after tooth loss.

Facts:

- [FDA](#) approved since 1982
- prevents bone loss
- 95-98% success rate
- over 50 years of clinical research
- majority of dental insurance review implants as the standard of care
- are the most advanced tooth replacement system ever devised
- helps preserve the jawbone and soft tissues to prevent the appearance of premature aging
- looks and function like normal teeth
- are placed/restored in the doctor's office with minimal discomfort
- improves comfort, appearance and speech
- are easier to keep clean than a bridge – you can floss and brush like normal teeth
- allows you to eat the foods you love, and talk, smile and laugh with confidence
- represent a conservative treatment option – adjacent teeth are left untouched
- never develops decay
- never require root canals
- can completely eliminate the need for a denture
- can help adults of any age
- gives patients a set of teeth that are natural looking and long-lasting.

Ask yourself the following questions:

- Are you missing one or more of your natural teeth?
- Do you have trouble chewing food?
- Do you have trouble speaking?
- Does your bridgework trap food, making it difficult to clean?
- Do you wear dentures?
- Do your dentures move around?
- Are your dentures uncomfortable or painful to wear?
- Are you tired of creams or adhesives?

If you answered 'yes' to one or more of these questions, call us on (07) 3256 9566 to schedule an evaluation appointment. We would be pleased to evaluate your oral health and discuss treatment options with you.
